CSE 411: Artificial Intelligence (Elective Course #6)

**400 Level, Mechatronics Engineering
2nd Term 2016/2017, Lecture #4**

Hazem Shehata

**Dept. of Computer & Systems Engineering
Zagazig University**

March 20th, 2017

Credits to Dr. Mohamed El Abd for the slides

Adminstrivia

Notes

- Assignment #1:
 - Due **today**.

Course Info:

- Website: <http://hshehata.github.io/courses/zu/cse411/>
- Office hours: Sunday 11:30am - 12:30pm

Types of search algorithms

- **Uninformed Search:**

Only has the information provided by the problem formulation (initial state, available actions, transition model, goal test, and step/path cost).

Outline

Uninformed Search (Cont.)

Algorithms

Breadth-first search

Depth-first search

Breadth-first search

Depth-first search

Depth limited search

Iterative deepening search

Uniform-cost search

Summary

Requirements & Reading Material

Uninformed Search

Breadth-first search

BFS properties:

- Complete (if b is finite).
- Optimal, if path cost is equal to depth:
 - Guaranteed to return the shallowest goal (depth d).
- Time complexity = $O(b^d)$.
- Space complexity = $O(b^d)$.

Breadth-first search

Depth-first search

Depth limited
search

Iterative deepening
search

Uniform-cost
search

Summary

Requirements & Reading Material

Uninformed Search

Depth-first search

- Algorithm is similar to BFS, except that the frontier is implemented as a LIFO queue (*i.e.*, stack).
- Algorithm always expands deepest unexpanded node in current frontier.

Summary

Requirements & Reading Material

Uninformed Search

Depth-limited search

- Depth-first search with depth limit l .
- Algorithm is a simple modification to the general tree-search or graph-search algorithm
 - It takes l as an extra argument.
 - It returns one of the following:
 - *solution* (solution found with the depth limit).
 - *failure* (no solution found in entire tree; $l \geq m$).
 - *cutoff* (no solution found within depth limit; $l < m$).

Summary

Requirements & Reading Material

Uninformed Search

Uniform-cost search

- A simple extension of BFS that works for any step-cost function.
- Instead of expanding the shallowest node, UCS expands the node n with the lowest path cost $g(n)$.
- The frontier is implemented as a priority queue ordered by g .
- Condition: No zero-cost or negative-cost edges, minimum cost is ϵ .
- UCS algorithm differs from BFS algorithm in 2 aspects:
 - Goal test is applied to a node when it is selected for expansion.
 - In graph version, a test is added in case a better path is found to a node currently on the frontier.

Optimal?	Yes ³	Yes	No	No	Yes ³
Time	$O(b^d)$	$O(b^{1+\lfloor \frac{C^*}{\epsilon} \rfloor})$	$O(b^m)$	$O(b^l)$	$O(b^d)$
Space	$O(b^d)$	$O(b^{1+\lfloor \frac{C^*}{\epsilon} \rfloor})$	$O(bm)$	$O(bl)$	$O(bd)$

- Note 1: assuming finite branching factor b .
- Note 2: assuming minimum step cost $\epsilon > 0$.
- Note 3: assuming equal step costs.

Outline

Outline

Uninformed Search (Cont.)

Algorithms

Breadth-first search

Depth-first search

Depth limited
search

Iterative deepening
search

Uniform-cost
search

Summary

Requirements & Reading Material

1 Uninformed Search (Cont.)

2 Requirements & Reading Material

Requirements

What do I need from you

- When given a certain problem you should be able to:

Requirements

What do I need from you

- When given a certain problem you should be able to:
 - Build the search tree up to a given depth.

Requirements

What do I need from you

- When given a certain problem you should be able to:
 - Build the search tree up to a given depth.
 - Traverse the search tree according to a given strategy.

Requirements

What do I need from you

- When given a certain problem you should be able to:
 - Build the search tree up to a given depth.
 - Traverse the search tree according to a given strategy.
- Answer descriptive questions.

Reading Material

Which parts of the textbook are covered

- Russell-Norvig, Chapters 3:
 - Pages 81 - 91.
