CSC 211 - Digital Logic Design 211 عال - تصميم المنطق الرقمي

First Term - 1439/1440
Lecture #8

Dr. Hazem Ibrahim Shehata

Assistant Professor

College of Computing and Information Technology

Administrivia

➤ Midterm #1:

- Exam/Solution is available on the website.
- Marks were posted to the website.

➤ ILMS:

- Will replace the website.
- Please contact Mr. Nayaar to activate your accounts.

Chapter 4: Boolean Algebra ... (... Continuing ...)

Karnaugh Map

➤ Purpose:

- Systematic method for simplifying Boolean expressions.
- Produce simplest SOP/POS expression → **minimum SOP/POS**.
- Suitable for expressions containing **5 variables at most!**

➤ Properties:

- Array of cells arranged in a way so simplification becomes a matter of grouping these cells!
- Each cell represents one row in truth table.
 - Number of cells = 2^n (where n is the number of variables).

| | | B | |
|---|---|------------------|------------|
| A | | 0 | 1 |
| 0 | 1 | $\bar{A}\bar{B}$ | $\bar{A}B$ |
| | | $A\bar{B}$ | AB |

2-Variable (A,B)

| | | C | |
|----|----|-------------------------|-------------------|
| AB | | 0 | 1 |
| 00 | 01 | $\bar{A}\bar{B}\bar{C}$ | $\bar{A}\bar{B}C$ |
| | | $\bar{A}B\bar{C}$ | $\bar{A}BC$ |
| 11 | 10 | $AB\bar{C}$ | ABC |
| | | $A\bar{B}\bar{C}$ | $A\bar{B}C$ |

3-Variable (A,B,C)

| | | CD | | | |
|----|----|--------------------------------|--------------------------|--------------------|--------------------------|
| AB | | 00 | 01 | 11 | 10 |
| 00 | 01 | $\bar{A}\bar{B}\bar{C}\bar{D}$ | $\bar{A}\bar{B}\bar{C}D$ | $\bar{A}\bar{B}CD$ | $\bar{A}\bar{B}C\bar{D}$ |
| | | $\bar{A}B\bar{C}\bar{D}$ | $\bar{A}B\bar{C}D$ | $\bar{A}BCD$ | $\bar{A}BC\bar{D}$ |
| 11 | 10 | $AB\bar{C}\bar{D}$ | $AB\bar{C}D$ | $ABCD$ | $ABC\bar{D}$ |
| | | $A\bar{B}\bar{C}\bar{D}$ | $A\bar{B}\bar{C}D$ | $A\bar{B}CD$ | $A\bar{B}C\bar{D}$ |

4-Variable (A,B,C,D)

2-, 3-, and 4-Variable Karnaugh Maps

Cell Adjacency

- Cells in a Karnaugh map are arranged so that there is only a **single-variable** change between adjacent cells.
 - Cells that differ by **1 variable** are adjacent.
 - **Example:** 0011 & 0111, 0100 & 0110
 - Cells with values that differ by **2+ variables** are not adjacent.
 - **Example:** 1101 & 0111

SOP Minimization Using Karnaugh Maps

- **Goal:** Simplify a SOP expression (standard or non-standard) to its minimum form → **Minimum SOP!**
 - **Minimum SOP** expression contains the fewest possible product terms with the fewest possible variables per term!!
- **Method:**
 1. **Map** SOP expression on a Karnaugh map.
 2. **Combine the 1's** on the map into maximum **groups**.
 3. **Determine minimum product** term for each group, and **combine minimum product terms** to form a minimum SOP.

SOP Minimization Using Karnaugh Maps

1. Map SOP expression on a Karnaugh map.

- Determine binary values of product terms.
- Place 1's in corresponding cells.

➤ **Example (1):** Standard-SOP → K-Map

$$X = \bar{A}\bar{B}\bar{C} + \bar{A}\bar{B}C + AB\bar{C} + A\bar{B}\bar{C}$$

SOP Minimization Using Karnaugh Maps

1. Map SOP expression on a Karnaugh map.

- Determine binary values of product terms.
- Place 1's in corresponding cells.

➤ **Example (1): Non-Standard-SOP → K-Map**

◦ $X = \bar{A} + A\bar{B} + AB\bar{C}$

SOP

Minimization Using Karnaugh Maps

2. Combine the 1's into max. groups.

- Each group contains 2^x adjacent cells.
- Every 1 must belong to at least 1 group.

➤ Examples:

SOP Minimization Using Karnaugh Maps

3. Determine minimum product terms (1 term per group) and combine them to form a minimum SOP.

➤ Examples:

$$X = \bar{B} + \bar{A}\bar{C} + AC$$

$$X = \bar{D} + B\bar{C} + \bar{A}C$$

Mapping Directly from a Truth Table

- The 1's in the output column are mapped directly into the cells corresponding to the values of the associated input variable combinations.

➤ Example: Truth Table ➔ K-Map

$$X = \bar{A}\bar{B}\bar{C} + A\bar{B}\bar{C} + AB\bar{C} + ABC$$

| Inputs | | | Output |
|--------|---|---|--------|
| A | B | C | X |
| 0 | 0 | 0 | 1 |
| 0 | 0 | 1 | 0 |
| 0 | 1 | 0 | 0 |
| 0 | 1 | 1 | 0 |
| 1 | 0 | 0 | 1 |
| 1 | 0 | 1 | 0 |
| 1 | 1 | 0 | 1 |
| 1 | 1 | 1 | 1 |

| | | C | |
|----|----|---|---|
| | | 0 | 1 |
| AB | 00 | 1 | |
| | 01 | | |
| | 11 | 1 | 1 |
| | 10 | 1 | |

“Don’t Care” Conditions

- If some input combinations are not allowed, we mark their corresponding output value by X’s.
- “X” means we “don’t care” about the output value in this case, and hence it can be set to 0 or 1.

➤ Example:

| Inputs <i>ABCD</i> | Output <i>Y</i> |
|-----------------------|--------------------|
| 0 0 0 0 | 0 |
| 0 0 0 1 | 0 |
| 0 0 1 0 | 0 |
| 0 0 1 1 | 1 |
| 0 1 0 0 | 1 |
| 0 1 0 1 | 0 |
| 0 1 1 0 | 0 |
| 0 1 1 1 | 1 |
| 1 0 0 0 | 0 |
| 1 0 0 1 | 0 |
| 1 0 1 0 | X |
| 1 0 1 1 | X |
| 1 1 0 0 | X |
| 1 1 0 1 | X |
| 1 1 1 0 | X |
| 1 1 1 1 | X |

POS Minimization Using Karnaugh Maps

- **Goal:** Simplify a POS expression (standard or non-standard) to its minimum form → **Minimum POS!**
 - **Minimum POS** expression contains the fewest possible product terms with the fewest possible variables per term!!
- **Method:**
 1. **Map** POS expression on a Karnaugh map.
 2. **Combine the 0's** on the map into maximum **groups**.
 3. **Determine minimum sum** term for each group, and **combine minimum sum terms** to form a minimum POS.

POS Minimization Using Karnaugh Maps

1. Map POS expression on a Karnaugh map.

- Determine binary values of sum terms.
- Place 0's in corresponding cells.

➤ Example: POS → K-Map

$$X = (A + B + C)(A + B + \bar{C})(\bar{A} + B + \bar{C})$$

POS Minimization Using Karnaugh Maps

2. Combine the 0's into max. groups.

- Each group contains 2^x adjacent cells.
- Every 0 must belong to at least 1 group.

➤ Example:

$$X = (A + B + C)(A + B + \bar{C})(\bar{A} + B + \bar{C})$$

POS Minimization Using Karnaugh Maps

3. Determine minimum sum terms (1 term per group) and combine them to form a minimum POS.

➤ Example:

$$\begin{aligned} X &= (A + B + C)(A + B + \bar{C})(\bar{A} + B + \bar{C}) \\ \rightarrow X &= (A + B)(B + \bar{C}) \end{aligned}$$

Conversion: POS \rightarrow SOP Using Karnaugh Maps

- After placing the 0's in the map, fill the rest of the cells with 1's and follow the steps to construct minimum SOP from K-maps.

➤ Example: POS \rightarrow SOP

$$X = (A + B + C)(A + B + \bar{C})(\bar{A} + B + \bar{C})$$

$$\rightarrow X = (A + B)(B + \bar{C})$$

$$\rightarrow X = B + A\bar{C}$$
